

EROSAWEB **GWB concertina**

SOIL STABILISER

1) THE PROBLEM

2) THE SOLUTION

3) PROBLEM SOLVED

Erosaweb is light and simple to install.

The cells are filled with granular infill creating a strong, durable and permeable surface.

The roadside is strengthened without giving a false impression of road widening.

EROSAWEB **GWB concertina**

SOIL STABILISER

Filter stone displaced and scattered from the road edge by vehicle overrun presents a hazard to other motorists. Scattered stones have been known to shatter windscreens and the lack of surface support can destabilise over-running vehicles.

Securing by pinning, usually with steel pins, to a durable surface.

The 'concertina' structure of interconnecting polymer strips forming pockets.

Erosaweb is light and simple to install.

Pockets contain and strengthen the infill material to provide vehicle support, whilst preserving the full permeability of the drainage stone.
