

Caring *with attractive* Protective Coatings

- Contech's range of protective coatings are all extensively tested
- Products have an excellent track record
- Manufacturer Nufins have over 40 years specialist experience in the protective coatings industry
- Ease and speed of application— Products can be applied by roller, brush or sprayer
- All products are manufactured to quality standards ISO 9001

Specialists in Protective Coating Technology

Anti-Carbonation Coatings

Concrete is by nature highly alkaline. This alkalinity passivates the steel and prevents corrosion of the reinforcing bars. The alkalinity of the concrete is commonly reduced over time by the process of carbonation caused by Carbon Dioxide penetration. **Nufins Covercrete** (Anti-Carbonation Coating) acts as a barrier to these harmful gasses as well as dramatically enhancing the structural environment through the use of colour.

E

Elastomeric Anti-Carbonation Coatings

Structures such as Car Parks are subject to stresses not experienced by some buildings characterised by their open nature and cyclical loading in everyday use. Consequently, cracking to concrete columns, soffits, beams and up stands is commonplace. Therefore **Nufins Proflex A** (Elastomeric Anti-Carbonation Coating) is a superior alternative to resin injection or other crack treatments particularly where dynamic or live cracking exists.

E

Anti-Graffiti Coatings

Graffiti is a major concern in a wide variety of surfaces and can turn even a previously pleasant environment into a threatening one. **Nufins Cleargard** (Anti Graffiti Coating) gives protection against this growing social problem and allow instant eradication of graffiti as part of a managed cleaning regime. **Cleargard** may be used either with existing finishes or as part of a newly applied decorative coating.

E

Chemical Resistant Coatings

Nufins Epigard is the market leading two part component resin extended epoxy high build coating characterised by its inbuilt flexibility, excellent adhesion and resistance to water and a wide range of chemicals. Epigard will successfully protect and waterproof concrete structures including bridge abutments, wing walls and bearing shelves, drainage channels, silos and tanks.

Protective Surface Treatment

Formulated from clear acrylic resin, this solvent borne treatment has excellent weather resistance properties, protecting substrates from aggressive atmospheric influences and appreciably reducing the carbonation of old and new concrete surfaces. **Nufins Nucryl** provides an attractive and protective finish to a wide variety of surfaces including all cementitious surfaces, brick, cast stone, slates and decorative plasters.
